

Position Controller for ROBO Cylinder
SEP series 8-axis Type

MSEP

8 AXES in ONE

8 MSEP controller AXES in ONE

Achieving High-Performance in a Compact Design Network Connectable Controller

Features

1

Compact Design

A successfully designed 8-axis compact controller with a 123 mm width x 115 mm height unit.

A 60% reduction in width from the predecessor controller which contributes to space savings within the controller cabinet.

2

Supports major field networks

Allows direct connection with the major field networks including DeviceNet, CC-Link, PROFIBUS-DP, MECHATROLINK, CompoNet, EtherCAT, and EtherNet/IP.

Network Specification Features

- 256 positioning points per each axis
- Allows designation of position and speed navigation numerically
- Ability to verify current position in real-time
- Significant communication time reduction within the controller (Approximately by 1/10 compared to the predecessor model)

3 Supports both the pulse motor and the servo motor

A single MSEP controller can operate both the pulse motor and the servo motor type actuators, reducing set-up efforts significantly such as wiring even when different types of actuators have to be used at the same time.

4 Simple absolute option

An absolute position encoder is available, which saves the position data by battery, providing prompt operation without returning to the home position after power off. Even in an emergency shut-off or momentary power-loss, it allows continuous operation from its last position.

5 Checking when to maintain based on the total number of movements and total distance travelled

The total number of actuator movements and the total distance travelled are calculated and recorded in the controller, and when the predetermined count or distance is exceeded, a signal is output to an external device. You can use this function to check when the actuator needs re-greasing or periodic inspection.

6 Recording the alarm occurrence time with the calendar function

An additional clock function facilitates the alarm analysis from the convenience of the display screen that shows the time of the alarm occurrence. (The retention period of the date and time data is 10 days)

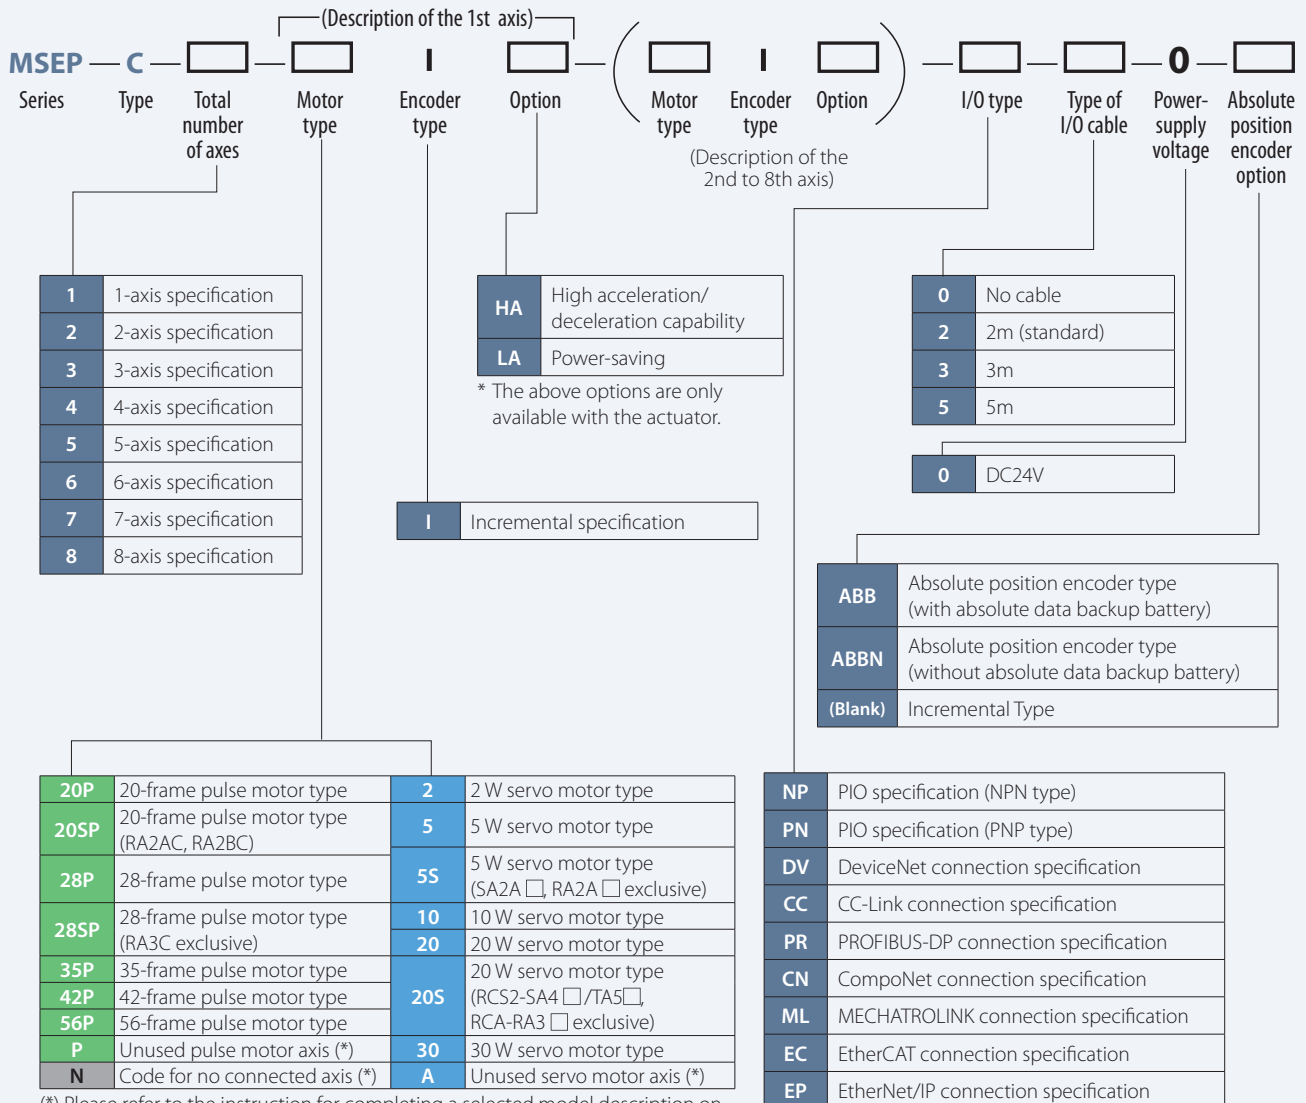

8 AXES in ONE

Models

Type	C								
I/O category	NP	PN	DV	CC	PR	CN	ML	EC	EP
Item name	PIO specification (NPN type)	PIO specification (PNP type)	DeviceNet Specification	CC-Link Specification	PROFIBUS-DP Specification	CompoNet Specification	MECHATROLINK Specification	EtherCAT Specification	EtherNet/IP Specification
Exterior view	 <p>* The picture shown is of the PIO specification. Depending on the I/O category, the PIO connector and field network joint connector changes.</p>								
Item description	Operates via digital signals from the PLC		Operates with any of the above field network connections. A choice of method either a serial communication with PIO specification control, or transmitting traveling position, velocity and acceleration by data is available.						
No. of positions	3 positions per axis		256 positions per axis (There is no limit if operated directly by transferring data)						
Standard price	-								

Configuration

* Representation of the 2nd to the 8th axis is depending on the total number of axes applied. (i.e. after the 2nd axis)

Guide for the description of the selected configuration

The description of the MSEP controller configuration varies depending on the type of actuator connected to the controller, and the total number of axes installed. Please see the following conditions to configure a desired controller.

Connect the **SAME TYPE** of actuators (either pulse motor type or servo motor type)

Connect a **MIXTURE OF TYPES** of actuators (both pulse motor type and servo motor type)

Please indicate the motor type code of the actuator starting from the 1st axis respectively.

e.g.) MSEP — C — 4 — 42PI — 56PI — 42P — 56PI — NP — 2 — 0

Total number of axes: 4
 1st axis: Pulse motor
 2nd axis: Pulse motor
 3rd axis: Pulse motor
 4th axis: Pulse motor

1st axis RCP2
 2nd axis RCP2
 3rd axis RCP2
 4th axis RCP2

If the total number of axes is an odd count, please indicate an [N] following the last axis description (as shown after the 3rd axis below for example).

e.g.) MSEP — C — 3 — 42PI — 56PI — 42P — N — NP — 2 — 0

Total number of axes: 3
 1st axis: Pulse motor
 2nd axis: Pulse motor
 3rd axis: No connected axis

Each board is designed to connect to a pair of axes, and two different types of motors cannot be connected to the same board. Please indicate the same types of motors for each pair of axes.

e.g.) MSEP — C — 4 — 42PI — 56PI — 20I — 20I — NP — 2 — 0

Total number of axes: 4
 1st axis: Pulse motor
 2nd axis: Pulse motor
 3rd axis: Servo motor
 4th axis: Servo motor

1st axis RCP2
 2nd axis RCP2
 3rd axis RCA
 4th axis RCA

If either motor type is an odd count, please indicate an [N] following the last axis description per the corresponding board.

e.g.) MSEP — C — 3 — 42PI — N — 20SI — 30I — NP — 2 — 0

Total number of axes: 3
 1st axis: Pulse motor
 2nd axis: Servo motor
 3rd axis: No connected axis

<If you choose to operate the controller with fewer axes connections now but may add more in the future>

- If there's a possibility to increase connections, for example, to 6 or 8 axes in the future but would like to start with only 4 axes to operate the controller now, it is possible to keep the base board installed as is and leave room for the potential axes by indicating an **[UNUSED AXIS]**.
- When configuring unused axis/axes for the pulse motor, please indicate a **[PI]** in the box for the motor type.
- When configuring unused axis/axes for the servo motor, please indicate an **[AI]** in the box for the motor type.
- When configuring unused axis/axes, please include number of unused axis/axes in the total number of axes.

e.g.) MSEP — C — 8 — 42PI — 56PI — 20I — 10I — PI — PI — AI — AI — NP — 2 — 0

Total number of axes: 8
 1st axis: Pulse motor
 2nd axis: Servo motor
 3rd axis: Servo motor
 4th axis: Servo motor
 5th axis: Unused axis (Pulse motor)
 6th axis: Unused axis (Pulse motor)
 7th axis: Unused axis (Servo motor)
 8th axis: Unused axis (Servo motor)

Actuator combination patterns for the MSEP

There are 40 combination patterns of the pulse motor type or the servo motor type actuator that can be connected to the MSEP controller as shown in the table below.

(all * are an incremental specification)

(The boxes in the configuration lines are to indicate the type of motor code number)

System configuration

PIO Controlled Motion Mode

The MSEP controller with the PIO control specification offers the following six-motion modes. In addition, Mode No. 0 through 2 support both the single and double solenoid valves for signal configuration.

Motion Mode No.	0		1		2		3		4		5		
Motion Mode Type	Standard 2-position motion		Speed change during movement		Position data change		2-input/ 3-position motion		3-input/ 3-position motion		Continuous cycle operation		
Feature	2-position motion		2-position motion		2-position motion		3-position motion		3-position motion		2-position continuous motion

Field network control motion mode

There are five motion modes to choose from in the field network control mode with the MSEP controller as follows.

Motion pattern (*1)	Description	PLC	Outline
Positioner 1/ Simple numerical mode	Positioner 1 mode is programmable up to 256 positions of data to designate the stop position. The simple numerical control allows designating the target position numerically. They both have the capability of monitoring the current position.	Target position Target position number Control signal Current position End position number Status signal	
Direct numerical control mode	This mode allows designating the target position, velocity, acceleration, and current parameters for pushing. Also, it is capable of monitoring the current position, real-time velocity, and the electric current command value.	Target position, Positioning width, Velocity, Acceleration, Pushing percentage, Control signal Current position Current value (Designated value) Current velocity (Designated value) Alarm code, Status signal	
Positioner 2 mode	Positioner 2 mode is programmable up to 256 positions of data to designate stop positions, and this mode does not allow monitoring of the current position. This mode has less in/out data transfer volume than the positioner 1 mode.	Target position number Control signal End position number Status signal	
Positioner 3 mode	Positioner 3 mode is programmable up to 256 positions of data to designate stop positions, and this mode does not allow monitoring of the current position. This mode has less in/out data transfer volume from the positioner 2 mode, and operates under minimum number of signals..	Target position number Control signal End position number Status signal	
SEP I/O	This mode allows the same functions with the field network as the PIO controlled motion mode 0 to 5 as described in the previous page.		Please refer to the PIO controlled motion mode.

(*1) Only the positioner 3 mode and the SEP I/O mode are available with CompoNet and MECHATROLINK.

Table of General Specification

Specification item	Description						
Number of axes in the controller	8 axes MAX						
Controller/ Motor input power	DC24V ±10%						
Controller power supply	2A						
Controller inrush current	5A MAX, under 30 ms						
Motor consumption current	Servo motor type	Rated ampere	Maximum		Pulse motor type	Rated ampere	Maximum
			Energy saver	Standard/Hi-accel./decel.			
	2W	0.8A		4.6A	20P	1.0A	2.0A
	5W	1.0A		6.4A	28P	1.0A	2.0A
	10W(RCL)	1.3A		6.4A	35P	2.0A	2.0A
	10W(RCA/RCA2)		2.5A	4.4A			
	20W	1.3A	2.5A	4.4A	42P	2.0A	2.0A
20W(20S type)	1.7A	3.4A	5.1A				
30W	1.3A	2.2A	4.4A	56P	2.0A	2.0A	
Motor inrush current	Slot numbers x 10A MAX, under 5ms						
Motor-encoder cable length	Maximum length 20m (note) for absolute position						
Serial communication (SIO port:dedicated teaching)	RS485 1ch (Modbus protocol compatible) Velocity 9.6~230.4kbps						
External interface	PIO specification	PIO specification : DC24 V dedicated signal in/output; Maximum input of 4 points/axis; Maximum output of 4 points/axis; Maximum cable length 10 m					
	Field network specification	DeviceNet, CC-Link, PROFIBUS-DP, MECHATROLINK, CompoNet, EtherCAT, EtherNet/IP(*)					
Data configuration and input method	PC software application, touch panel teaching pendant, gateway parameter configuration tool						
Data retention memory	Restore the position data and parameter in non-volatile memory (no limited input)						
Positioning points	PIO specification: 2 or 3 points Field network specification: 256 points (no limited input for the simple numerical control and the direct numerical control) (Note) The number of designated positions vary depending on the parameter configuration with motion mode selection.						
LED display (On the front panel)	LED for driver status, 8 LEDs (for each driver board) Status LED, 4 LEDs (PIO specification), 7 LEDs (Fieldbus specification)						
Electromagnetic brake force release	Enable to force-release by transmitting a deactivation signal to each axis (DC24 V input).						
Surge protection	Overcurrent protection (An interception semiconductor circuit is furnished on each slot)						
Electric shock protection	Class I basic insulation						
Insulation resistance	DC500V 10MΩ						
Weight	620, 690g with the absolute position encoder specification plus 1950 g absolute data backup battery (8-axis specification)						
Cooling method	Forced- air cooling						
Required ambient temperature/humidity for operation	0~40°C, under 85% RH (non-condensing)						
Vibration resistance	Frequency 10~57Hz/Amplitude 0.075mm Frequency 57~150Hz/Acceleration 9.8m/s ² Each XYZ direction, sweep time 10 minutes, sweep count 10 times						
Shock resistance	150mm/s ² , 11 ms half sine wave pulse, each XYZ direction 3 times						
International Protection code	IP20						

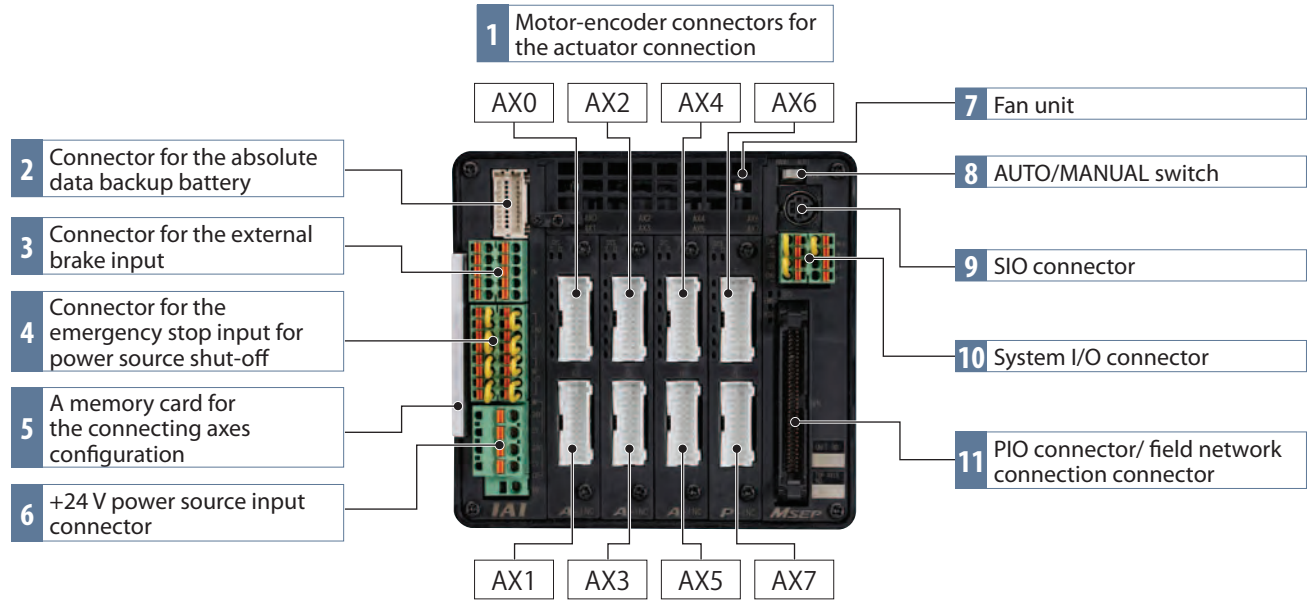

Exterior Dimensions

Absolute data backup battery box

Names of the MSEP Controller components

Note) All the connectors are represented as AX0 through AX7. Please be aware that the motor-encoder cable for the first axis is to be connected to AX0 and the second axis to AX1 respectively.

Descriptions of the components

1 Motor-encoder connectors for the actuator connection

Connect motor-encoder cable to the actuator

2 Connector for the absolute data backup battery

Connect the absolute data backup battery if the controller has the absolute position encoder specification

3 Connector for the external brake input

The connector to input a signal to release the brake for the actuator externally.

4 Connector for the emergency stop input for power source shut-off

The emergency stop input connector to connect in/output terminal of the external relay of the motor drive shut-off and each driver slot (*).

5 Memory card for configuration of the connecting axes

A memory card for the configuration of the controller axes which is removable to examine the contents.

6 +24 V power source input connector

The main power source connector for the controller: Motor drive source shut-down is possible while restoring the power source for the controller unit in case of an emergency shut-down; This is because the terminals for the power source of the motor and the controller are separate.

7 Fan unit

Easily replaceable fan unit. (Replacement fan unit: Model MSEP-FU)

8 AUTO/MANUAL switch

To switch automatic operation to/from manual operation

9 SIO connector

To connect teaching box and the connecting cable for PC software

10 System I/O connector

The connector for remote AUTO/MANU switch input and emergency stop input for the entire controller with functions including an external regeneration-resistance expansion terminal.

11 PIO connector/ field network connection connector

The PIO specification — connects to a 68-pin ribbon I/O cable.

The field network specification — connects to a field network type specified on the MSEP controller.

(*1) The shut-off feature is available on a single slot basis which is for two axes per slot. Please note that a single axis basis cannot be accommodated.

Options

Teaching pendant

Summary Teaching device for positioning input, test operation, and monitoring.

Model **CON-PTA-C** (Touch panel teaching pendant)

Setting

Specification

Item	CON-PTA-C
Data input	○
Actuator motion	○
Operating ambient temperature/humidity	Temperature 0 to 40°C, humidity 85%RH or less
Operating environment	Free from corrosive gas and especially, considerably dusty condition
Protection degree	IP40
Weight	Approximately 570g
Cable length	5m
Display	65536 color White LED back light
Standard price	-

PC software (Windows only) * For the field network specification, the PC software is required.

Summary A startup support software for inputting positions, performing test runs, and monitoring. With enhancements for adjustment functions, the startup time is shortened.

Model **RCM-101-MW** (External device communication cable + RS232 conversion unit)

Setting

Model **RCM-101-USB** (External device communication cable + USB converter adaptor + USB cable)

Setting

External regeneration resistor

Summary The regeneration resistor converts regenerated current dissipated during deceleration of the motor load into heat. The MSEP controller has an internal regeneration resistor for ordinary operations, however, depending on the operational condition, please install an external regeneration resistor if the internal regeneration resistor capacity is insufficient.

Note: When 3 or more servo actuators with the HA option are used then a regeneration resistor is recommended to convert the excess motor current into heat.

Model **RER-1**

Exterior dimensions

Driver board

Summary A supplement or modification to the driver board is feasible with the MSEP controller. When the actuator that control motions needs to be modified, just replacing the driver board would serve the purpose without changing the entire controller. (The parameters need to be adjusted when changing the driver board)

Model

		Type	Model	Standard price
For the pulse motor	Incremental	1-axis	MSEP-PD1-I	-
		2-axis	MSEP-PD2-I	-
	Absolute position encoder	1-axis	MSEP-PD1-A	-
		2-axis	MSEP-PD2-A	-
For the servo motor	Incremental	1-axis	MSEP-AD1-I	-
		2-axis	MSEP-AD2-I	-
	Absolute position encoder	1-axis	MSEP-AD1-A	-
		2-axis	MSEP-AD2-A	-

Box for the absolute data backup battery

Summary If the absolute position encoder specification is selected with code ABB, the absolute data backup battery box is included with the controller. However, if the battery box is ordered as a separate unit, it does not include the battery but just the box itself. If the battery is needed, please purchase it separately. (Model: AB-7).

Model **MSEP-ABB** (Battery not included)

Exterior dimensions See P12

* A cable (Model CB-MSEP-AB005) that connects the absolute data backup battery box to the MSEP is included with the box.

Replacement battery

Summary The replacement battery for the absolute data backup battery box.

Model **AB-7**

Replacement fan unit

Model **MSEP-FU**

Service parts

Integrated Motor-Encoder Cable/ Motor-Encoder Robot Cable for RCP4

Model **CB-CA-MPA** [] [] [] / **CB-CA-MPA** [] [] [] -RB

* Please indicate cable length (L) in [] [] [], maximum 20 m. e.g.) 080=8 m

* The robot cable is designed for flex-resistance: Please use the robot cable if the cable has to be installed through the cable track.

Actuator side 1-1827863-1 (AMP)

Pin No.	Signal name	Color
A1	ØA/U	Blue(Black)
B1	VMM/V	Orange (White)
A2	Ø A/W	Green (Brown)
B2	ØB/-	Brown (Green)
A3	VMM/-	Gray (Yellow)
B3	Ø B/-	Red (Red)
A4	LS+/BK+	Black (Orange)
B4	LS-/BK-	Yellow (Gray)
A6	-/A+	Blue (White)
B6	-/A-	Orange (Yellow)
A7	A+/B+	Green (Red)
B7	A-/B-	Brown (Green)
A8	B+/Z+	Gray (Black)
B8	B-/Z-	Red (Brown)
A5	BK+/LS+	Blue (Black)
B5	BK-/LS-	Orange (Brown)
A9	LS_GND	Green (Green)
B9	VPS	Brown (Red)
A10	VCC	Gray (White)
B10	GND	Red (Yellow)
A11	FG	Black (-)

Controller side PADP-24V-1-5 (JST)

Pin No.	Signal name	Color
1	ØA/U	Blue (Black)
